

“Rescue the Compromised Dentition”

Are you tired of treating non-carious cervical lesions and buccal pits, prescribing Nightguards and waiting for recurrent decay under your restorations on malpositioned teeth?

Do you find treatment planning the following conditions challenging?

Worn dentition

Changes in VDO

Aesthetic Dilemma

Lack of interocclusal space

Lack of bone for implants

Tipped teeth

Crowding

Fractured teeth

Periodontal concerns

Spacing between teeth

Would you like to help your patients keep their teeth for as long as possible by providing treatment plans that address periodontal, restorative, functional and aesthetic concerns? Does the idea of providing a comprehensive, personalized, interdisciplinary treatment plan interest you?

If you answered yes to any of the above questions, then register for “Rescue the Compromised Dentition”, a full-day course introducing the concept of *Orthodontic Dentistry: The Next Frontier*. The day will be spent demonstrating the possibilities and treatment options that *Orthodontic Dentistry*, **using Invisalign clear aligners**, can provide for your patients. The best possible dental outcomes can be realized when the teeth are in their optimal locations.

Before & After of Sample Cases:

DATE: Fri. Mar. 31'23

TIME: Registration and Breakfast @ 7:30 am

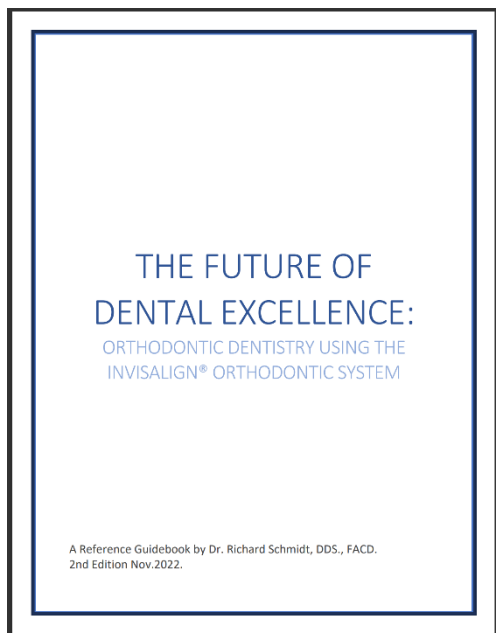

Presentation begins @ 8:15 am

Lunch 12:30 – 1:30
