# Medical Emergencies in the Dental Office (Are You Ready?)

Annual Kingston & District Dental Society Treleaven Lecture

Friday, January 20<sup>th</sup>, 2023

Category 1 - 6 CE Credits

## Session Description:

This interactive session will review common and/or important medical emergencies in the dental office. Our discussion will range from common causes of medical issues to uncommon threats to patient safety to how to organize your emergency kits using scenarios for clinical context. Because proper management of urgencies and emergencies requires proper preparation, we will spend time discussing in overview and in detail how to prepare our office (i.e. drugs and equipment) and how to prepare ourselves and our teams for the statistically inevitable. A dental practice will encounter a medical emergency once every 18 months. Are you ready?

## Learning Objectives:

- To review the incidence and etiology of common medical emergencies
- To refine medical history reviews and patient assessment
- To better recognize and diagnose medical emergencies
- To improve the protocols to manage medical emergencies in the office
- To review medical emergency drugs and equipment, including their proper use and drug dosages
- To establish management algorithms for in-office medical emergencies

## Please Note:

In order to qualify for Category 1 credits each member **MUST BE ON TIME AND ATTEND THE ENTIRE LECTURE**. To ensure this, each member will need to sign in and out as well as complete an assessment form for the session. Failure to do so will render these credits as Category 2.
